PRESS RELEASE

New UV Curing Station and Coating Capability for Coveris Advanced Coatings

Coveris Advanced Coatings, 8/05/2015 – Coveris Advanced Coatings, UK has recently installed a state of the art UV curing station, as well as investing in a new coating capability for the company’s USA site.

With 50 years’ experience Coveris Advanced Coatings is recognised as a global leader in providing coating services from its manufacturing facilities in the USA and UK. Each facility has several coating lines from 12” (305mm) to 65” (1650mm), coaters in clean room environments, numerous coating techniques, a variety of curing methods and sheeting, slitting and laminating capabilities.

New UV Curing Station
Coveris Advanced Coatings has recently installed a state of the art UV curing station on its 63” wide coating line. The new system will cure hardcoat formulations used in anti-scratch products for optical, electronic and security markets. The new unit is amongst the most powerful available and its modular design ensures uniform cure across the web.

The new UV technology will allow Coveris Advanced Coatings to create harder, more durable surfaces with enhanced scratch resistance whilst still maintaining product flexibility. This creates opportunities for customers to enhance their products and open up new market segments where superior hardness is required.

Sales and Marketing Director, Fraser Kinnaird states; “Continued investment in the business is key to maintaining our competitive edge and providing us with tools to break into new markets. The scratch resistance we can now achieve in our films creates great opportunities to sell into high performance applications including the personal electronics market.”

New Coating Capability
Coveris Advanced Coatings in the USA has invested in a new coating capability based upon a 65” (1650mm) wide, multi-head coater with a 120 foot (36.5m) long drier. The ability to coat dual layers in a single coating pass or to coat on both sides of a substrate greatly enhances Coveris Advanced Coating’s existing coating & laminating capabilities.

This investment has been made to meet customer demands and to continue the excellent growth enjoyed in markets as diverse as digital imaging, medical, electronics and security markets. The enhanced features of the new coater will permit access to more technically demanding applications and deliver a very efficient manufacturing process. The increased
capacity also provides customers with a "coating services" solution that avoids the need for them to make substantial investment in establishing their own coating equipment.
